Ailin is a digital health company enabling large-scale preventive programs outside the walls of traditional healthcare systems. Its end-to-end platform combines lab analysis and AI-assisted, physician-validated reports within an integrated digital infrastructure.

With operations across 7 European countries and users in 95+ countries, Ailin works with pharma companies, hospitals, pharmacies and insurers to make preventive healthcare scalable, accessible and clinically rigorous.

**The infrastructure that makes preventive health scalable**

## Products & Services

Ailin's infrastructure enables organizations to launch decentralized preventive programs in weeks, across hospital, community, corporate and direct-to-patient settings.

- B2B: Pharma companies and hospitals deploy population screening, early disease detection and real-world evidence programs — with partners including Sanofi and Boehringer Ingelheim.
- B2B2C: Pharmacies, sports centers and insurers integrate the platform to offer preventive health programs to their own clients and members.
- B2C: Patients access 30+ CE-IVD certified clinical tests directly through Ailin's online platform, with AI-assisted reports and an average satisfaction of 9.6/10.

## BIODATA DEVICES

Jose Antonio Astruga Bravo  
Production Manager  
[comercial@biodatadevices.es](mailto:comercial@biodatadevices.es)  
(+34) 983 704 402

At Biodata Devices, we are end-to-end manufacturers of telemedicine solutions. We design, develop (hardware & software), and manufacture advanced vital signs monitoring stations.

Our technology is highly versatile, seamlessly integrating into multiple digital clinical records to meet the specific needs of any hospital or remote care project. We deliver precise and reliable medical connectivity to revolutionize patient care.

**lifehub by Biodata Devices: monitoring patients everywhere**

### Products & Services

As an MDR-certified manufacturer, our vertical integration grants us complete platform control to perfectly adapt to any patient's needs.

LifeHub features seamless EHR integration, all medical probes unified in one app, an intuitive touchscreen interface, and built-in video conferencing.

Our versatile lineup includes LifeHub Pro & Pro Nurse (telemedicine carts), LifeHub Pro Sea (offshore & military), and LifeHub HaD (portable medical bag) and lifehub home & lite (for residential use).

## EPHION HEALTH ↗

Quique Llaudet  
CEO  
[quique@ephion.health](mailto:quique@ephion.health)  
(+34) 634 270 335

Ephion Health is a digital health company delivering a hardware-agnostic AI platform that transforms mobility data into clinically validated digital biomarkers.

We generate objective, sensitive measures of functional capacity in people with mobility-impairing diseases, enabling pharma companies to de-risk drug development and providing clinicians with precise, data-driven decision-support tools.

## Turning mobility data into clinical-grade biomarkers

### Products & Services

Ephion Health provides a hardware-agnostic AI platform that converts real-world mobility data into clinically validated digital biomarkers.

Using data from wearables and devices, our platform delivers objective and sensitive measures of functional capacity for mobility-impairing diseases.

Ephion supports pharma companies in clinical trials by enabling robust, highly sensitive endpoints, and empowers clinicians with data-driven insights for patient monitoring and decision-making.

## GRUPO OESÍA

María Fernanda Aguirre Ojea, Digital Healthcare Manager at Grupo Oesía  
[mfaguirre@oesia.com](mailto:mfaguirre@oesia.com)  
(+34) 639 241 936

Grupo Oesía is a Spanish multinational technology company specialized in dual-use engineering, developing and delivering projects in 42 countries. With a team of 4,000 professionals across 20 corporate locations in Europe, Latin America and Asia, the Group has spent over 50 years innovating in products and services that benefit millions of people worldwide, with the purpose of creating a better, more efficient, secure and sustainable world. Through Oesía Networks-Grupo Oesía, the Group delivers digital transformation and advanced e-Health solutions.

Powered by technology, Delivering value.

### Products & Services

We deliver digital health solutions for providers and health systems, combining clinical and care management software, clinical document intelligence, AI-enabled knowledge and decision support, interoperability, healthcare cybersecurity, and digital transformation services. Our focus is on secure, scalable, standards-based solutions that improve workflows, care coordination, patient engagement, and operational efficiency.

## LEGIT.HEALTH ↗

María Ribagorda  
Digital Health Manager  
mariaribagorda@legit.health  
+34 625 742 302

Legit.Health is a medical AI device that analyzes skin images to assist in the diagnosis of 320+ skin conditions and deliver automatic severity scoring, enabling objective and consistent assessment of dermatological conditions.

It helps reduce clinical derivations and streamline decision-making through optimized workflows that integrate directly into care systems. The technology also empowers teledermatology, allowing remote monitoring and scalable, high-quality skin care.

Diagnose, triage and monitor skin conditions with clinical AI

### Products & Services

Legit.Health is the AI-powered software companion for dermatology workflows in hospitals, clinics and primary care centres.

Co-developed and validated with leading European dermatologists, our CE-marked Class IIb medical device analyses skin images to support the diagnosis of 320+ conditions, calculate validated severity scores (PASI, EASI, SCORAD, UAS7, etc.), and document lesion evolution objectively.

Primary care physicians gain confidence in triage and referrals; dermatologists save documentation time and obtain measurable outcomes for chronic patients.

## LINA [↗](#)

Andra Stefanov  
Marketing & Business Development Manager  
astefanov@doolehealth.com  
(+34) 627 001 882

LINA is the AI division of Doole Health, a digital health company founded in 2019 as a spin-off of the Fight Infectious Diseases Foundation (Barcelona).

With a proven platform for telemedicine and remote patient monitoring, Doole operates across 11 countries with +60k patients, +80 healthcare centers, and +18 partners — including hospitals, private clinics, insurers, and public health systems. LINA brings this clinical expertise into a new generation of specialized AI solutions that support healthcare professionals across the entire patient journey.

Care for the patient. Let LINA handle the rest

### Products & Services

LINA Care is LINA's first validated solution — a conversational AI assistant that automates remote patient monitoring through voice, chat, and video, powered by generative AI and RAG architecture with contextual memory.

It enables clinical teams to follow up patients beyond the clinical setting, turning every interaction into structured, traceable clinical data.

Building on this foundation, LINA is expanding its portfolio with LINA Advisor, Triage, and Transcript — specialized AI solutions designed to support healthcare professionals across the entire patient journey.

## MEDIDEDALIA

Joan Sole Roig  
COO  
[joan.sole@medidedalia.com](mailto:joan.sole@medidedalia.com)  
(+34) 659 098 668

Medidedalia is an AI-driven healthcare company focused on maximizing clinical safety and improving patient experience through innovative generative AI. It uses safe AI to develop solutions for healthcare providers and insurers, including tools for liability claims management, risk analysis, and clinical data processing. By collaborating closely with hospitals and institutions, it delivers secure, practical applications that enhance decision-making and operational efficiency.

## Generative AI for safer care, better experiences and claims management

### Products & Services

Medidedalia offers AI-powered solutions for insurers and healthcare providers.

Its AI Claims Management platform helps insurance companies assess medical liability cases by analyzing risk, predicting outcomes, and supporting decision-making.

Criteria enables hospitals to measure and improve quality of care by collecting and analyzing patient feedback, identifying critical issues, and generating actionable insights to enhance patient experience and clinical performance.

## MEDIKTOR

Mediktor is a healthtech company providing clinically validated AI-powered digital triage and pre-diagnosis solutions. Its technology helps patients understand their symptoms and guides them to the appropriate level of care.

Used by healthcare providers, hospitals, insurers, and pharmaceutical companies, Mediktor improves patient access, optimizes healthcare resources, and enhances clinical decision-making while ensuring safety and accuracy through rigorous clinical validation.

### Products & Services

Mediktor delivers clinically validated AI for digital triage and pre-diagnosis across the full care journey.

For patients, it offers a smart symptom checker that guides them to the right level of care. For professionals, Mediktor+ provides AI-powered clinical support with structured insights to enhance decision-making.

Designed for real-world healthcare, the platform improves access, reduces inefficiencies, and ensures safe, scalable patient navigation.

## MYVITALE

Jorge García Galduroz  
Founder & CEO  
[jorge@yvitale.com](mailto:jorge@yvitale.com)  
(+34) 670 498 378

MyVitale is a leading AI-powered health coaching platform with over 2 million users and clients in 8 countries. We deliver highly personalized physical activity, nutrition, and lifestyle programs to improve chronic conditions such as diabetes, obesity, cancer, and aging.

Our technology combines behavioral science, real-world data, and AI to adapt continuously to each patient. Healthcare providers can monitor outcomes, enhance adherence, and scale preventive and therapeutic interventions.

**Precision lifestyle medicine, powered by AI**

### Products & Services

MyVitale Health Coach is an AI-driven platform delivering personalized physical activity, nutrition, and lifestyle interventions for prevention and management of chronic diseases.

Our solution dynamically adapts to each user using real-time data, behavioral patterns, and clinical goals. It integrates with wearables and medical devices to optimize adherence and outcomes.

Healthcare providers access a cloud-based platform to monitor patients, track KPIs, and scale personalized care. We offer APIs and SDKs to integrate our technology into healthcare systems, insurers, pharma, and corporate programs.

TECNALIA is Spain's largest applied research and technological development centre, a European benchmark and member of the Basque Research and Technology Alliance. We transform research into prosperity, helping companies become more competitive to generate wealth and growth.

Our Health team develops advanced technologies for personalized medicine, medical devices, digital health (generative AI, imaging) and medical robotics. We stand out for our multidisciplinary expertise, transferring research into market-ready solutions with high economic and social impact.

**Anticipating is an attitude**

## Products & Services

TECNALIA's Health Team develops advanced solutions for prevention, diagnosis, treatment, and rehabilitation. It focuses on digital health (AI clinical support, data analytics, telemedicine), medical devices (wearables, biosensors, robotics), and diagnostic imaging, integrating AI and advanced image analysis to support clinical decision-making.

The team provides full R&D services, from prototyping and testing to regulatory support. It specializes in neuroengineering, rehabilitation technologies, and biomedical research. With hospitals and industry, it accelerates the translation of research into healthcare solutions.
